

Business Brunch Digital: Cybersecurity

Current Challenges in Connection with IT Security Incidents

Cyberattacks continue to present massive challenges for companies, causing more than a few companies to fail or sustain massive losses. In our Digital Business Brunch: Cybersecurity, we would like to provide insight into the most important legal and technical measures which companies can take in order to successfully manage IT security incidents, both within and outside the bounds of data protection law.

Accordingly, we will address the topic from a technical viewpoint by focusing on incident response and emergency measures, while our presentation from a legal standpoint will talk about the legal consequences of IT security incidents and the legal boundaries of IT forensics, as well as the measures which need to be taken in each case.

The event is particularly designed for managing directors, company IT security and data protection officers and other decision-makers in the areas of data protection and IT security.

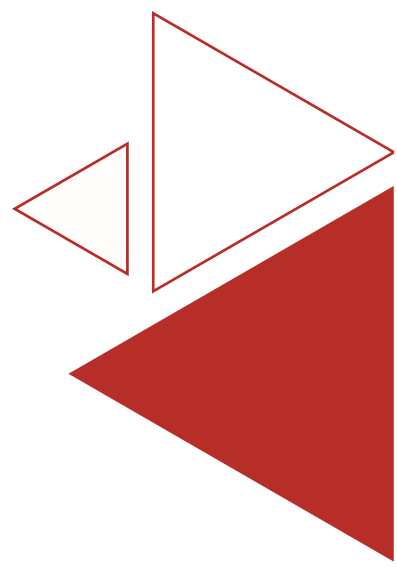

Speakers

- > Dr. Tilman Frosch, Managing Director, G DATA Advanced Analytics, G Data CyberDefense
- > Stefan Hessel, Senior Associate and Co-Head Digital Business Unit

Register now. Admission is free of charge.

The event will be conducted as a webinar with Zoom video conferencing software.
